The moieties have reciprocal

duties; e. g., after a death a member of the moiety complementary to the deceased person's moiety must kill an animal in the ensuing hunt, and after a dance the performers are washed by men of the opposite moiety. At Kejara only the Chera had the right to make bull-roarers.

Colbacchini (1925) ascribes seven clans to each moiety; Lévi-Strauss (1936) found six in the Chera, four in the Tugare. Both authors connect the clans with animal and plant species, and at times the linkage is multiple; e. g., a single Kejara clan is associated with the armadillo, the red macaw, and the dourado. It is not clear to what extent such plurality implies distinct subdivisions or whether a homogeneous clan unit is related to the several species in question.

The association does not necessarily involve a totemic name. This, e. g., is lacking in the baaddegaba clan despite its connection with the jaguar, a fish, and a bird. Since in all cases the linked species are freely killed and eaten, Lévi-Strauss (1936) regards the term "totemism" as inapplicable. According to him, a clan ancestor would receive a revelation from a spirit, whose embodiment in such and such a material guise would create the existing bond with a species and might inaugurate a corresponding appellation for the descendents.

As explained under Houses and Villages (p. 420), a secondary dichotomy characterizes the Vermelho River people; an axis perpendicular to the course of the river creates an Upstream and a Downstream half. This division leaves some of the clans intact, but splits up others into an Upstream and a Downstream section.

The clans have specific prerogatives, whence spring notable differences in wealth. Ceremonial bows, arrows, lip pins, and the pennants on penis sheaths bear designs distinctive of particular clans. Again, clans own personal names, dances (pl. 88), and songs. Certain clans contracted preferential marriages with others, apparently on the basis of personal names.

In the Rio das Garças district each village has two chiefs representing the mythical twins, Bakororo and Itubori, of whom the former takes precedence. Both are of the Weak moiety, but belong to distinct clans or subclans associated with the jaguar. Tradition has it that anciently both were of the Strong moiety. In accordance with the matrilineal system, succession is nepotic.

The chiefs are very influential, but lack coercive authority. They announce in the evening what is to be done on the following day, give marching orders, determine the location of clan huts in the settlement, lead in war, receive messengers, conduct various rites, and generally maintain old usage. But the individual tribesmen retain complete personal freedom, checked only by the vivid fear of disapproval. Even murder, instead of being punished, merely evokes a feud.

In the Vermelho district the several villages are under one paramount chief who enjoys greater power, but this may be due to Neo-

/454 cont./ Caldas, who, to his sorrow, saw that his
578 tent-mate who was also taking part had her breast scratched, forced the
[529] great chief /455/ Moguyokuri in; with tremendous calm the latter stepped into the noisy crowd and suddenly it was quiet. There was not a sound; his mighty arm shoved aside the three most dangerous women at once. Maria had definitely lost; she did not say a word and stood scowling, arms crossed, her bosom heaving violently, while a friend on her side smoothed her tousled hair. More disgruntled ones tried to unleash the storm once again, but the laughter of Corona won out;

Fig. 127. Bororó woman.

578 they dispersed, and the shrill old woman, at a triumphant trot, was led off by three women.

519 Shaking our heads, we turned our steps homeward toward our shack, but there, too, we were driven back by an infernal noise. The soldiers were dancing and singing in the moonlight with their mulattoes and Indian women; they were making music with harmonica, with fork and plate -- carnival everywhere!

[526] I went back to the men's house; two men were practicing wrestling. They grasped each other under the arms, bending far forward, and remained in this position for a long time, until one of them suddenly tried one leg, or rather his heel, to press in the knee-hollow of the other one and knock him over, but he was lifted up and lost.

/503 cont./

629 Occasional thefts were investigated with much noise, but without result. The chiefs or older persons ran around everywhere; long speeches were made on the open plaza. This happened once when Ehrenreich lost a fine knife. They went from [411] hut to hut, everyone had to show their knives, and we saw, to our surprise, that there were quantities of them (we counted 21 in one woman's possession). In the end, however, it was always said that the object had been hidden in the forest.

844 Birth; names. The woman gives birth in the forest, leaning against "pae," the "father," is what I wrote down, and I do not know whether it ought not to be "pao," against the "tree." The eyes of the child are assiduously blown upon; the father cuts the umbilical cord with a bamboo splinter and puts on a string.
846 The father and mother eat nothing for two days; on the third they may take only a little warm water. If the man should eat, [844] he and the child would fall ill. The afterbirth is buried in the [515] forest. Until the return of menstruation the woman may not bathe; then, however, and throughout these days it is done
847 diligently. Abortions with the help of internal remedies are said to be frequent, especially on the part of the ranchão women. If
853 the mothers no longer wish to nurse, they squeeze out their breasts and "dry the milk over the fire, whereupon it stops."
757 Medicine for sick children, which was prepared by the apothecary,
846 was taken by the fathers. On the couvade, cf. pages 391 ff.
352 The subsidiary question, whether the father lies in the hammock, is automatically answered in the case of the Bororó, for they have none and yet practice the couvade.

553 The boy is given a name soon after birth when the lower lip [304] is pierced, cf. page 592, which, by the way, may be done by persons other than the medicine man. The person performing the operation inquires, someone proposes a name, and it is adopted. Girls were also named soon after birth by relatives.
551 The names were those of animals and plants; Moguyokuri was said to be an animal related to the agutí.

601 sister (*ashimbí*) which are extended to both parallel and cross cousins. Distinctions are made for younger and older sibling. Only one term is used for designating one's own children, brother's and sister's children, as well as grandchildren, *manundé*. (See chart 12.)

582 An individual is prohibited from marrying parallel and cross cousins but beyond this restriction he is permitted to marry into any of the other families. After marriage a young man lives 591 with his wife's family until his father-in-law dies. He then builds a house near his own brothers. During his stay with his wife's family he obeys [606] his father-in-law as if he were his own father. There appear to be no father- or mother-in-law taboos. Disputes between the families were ●[627] settled by the chief who forced wrongdoers to make payments to the injured parties.

RELIGIOUS BELIEFS AND PRACTICES

MYTHS

773 One day some ripe figs fell from the fig tree and out of one of these figs came *Aípuku*, the first man in the world. He woke up suddenly and walked around. He was lonely and thought a long time about what to do. Then he picked up four figs and placed them in a row on the ground and walked away. He heard voices, and when he came back the figs had turned into human beings, two men and two women. One of these was *Barabéla* whom he married; the others went away.

Then *Aípuku* made the ancestors of many Indian tribes. He took macaba palm nuts and set them in a row; from these nuts came the Umotina—the men came from the long nuts and the women from the short nuts. He made skirts for the women and gave each man a bow and some arrows, told them where to live, and gave each one a name. These people married and are the ancestors of the Umotina. Then he made many other Indian tribes, using the fruit of the mangaba and the berries of the bauwi tree.

One day *Barabéla* asked *Aípuku* what was wrong with his legs. He looked down and noticed that the calves of his legs were sore and swollen. They kept swelling until they burst open. Out of one calf came the white men (*wasé*), and out of the other, the *abusé*, or enemy Indian tribes.
